

DIM WITHOUT A DIMMER

- light sources with built-in dimmers open up new possibilities!

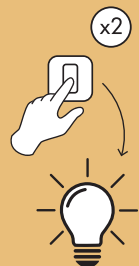

Did you know that it is possible to dim light sources without installing a dimmer? There are smart light sources that give you the right brightness without the hassle.

With a light source with a built-in 3-step dimmer, you can easily adjust the brightness by clicking the switch once, twice or three times. You don't have to worry about electrical installations or whether the dimmer is compatible - it's all done at the touch of a button!

We have a variety of models with 3-step dimmers built in, from basic lamps to more decorative light sources. Many even have a memory function that remembers the last setting.

See all models and place your order at startrading.com (search for 3-step)

1 click
= ca 10% of total brightness

Click once on the switch on the wall or lamp cord and get 10% brightness.

2 click
= ca 50% of total brightness

Click again within three seconds and the brightness will increase to about 50%.

3 click
= 100% of total brightness

Click once more to maximise the light.
